CONGRATULATIONS on the purchase of an Aussie Failure to maintain the machine in line with the Mobi-blaster professional high pressure water blaster. services outlined on the back page will invalidate These top of the range machines have been designed warranty. High pressure accessories carry a 3 month to be easy to use, simple to service and offer reliability warranty. and performance.

read this Instruction Manual thoroughly following all our prior permission. The reason for return must be directions carefully. By doing so you will ensure safe clearly state. operation of the unit and will enjoy long and trouble N.B. free service from your heavy duty water blaster.

GUARANTEE ... **EXCLUSIVE 3 YEAR PUMP + ENGINE WARRANTY**

This Aussie Eco Clean product is guaranteed against faults in manufacture for two years from purchase. The Bertolini pump has a three year warranty, but must be serviced by an authorised service agent every six months to maintain this warranty. Keep your Battery warranty is covered by Federal/Ryde Batteries, receipt as proof of purchase and all service receipts. call (02) 9879 5422 for your nearest outlet. This guarantee is invalid if the product is found to have been abused in any way, or not used for the purpose for which it was intended.

Routine maintenance is the owner's responsibility.

Where possible return faulty goods to the place of Before attempting to operate your machine please purchase. No products can be returned to us without

> Warranty is not transferrable to third parties in the event of sale of the machine within the warranty period. Please note that any parts used in warranty repairs are guaranteed for a period limited by the original warranty of the parent product.

Engine warranty is the responsibility of the engine manufacturer. Unit must be returned to authorised engine dealer for evaluation of engine warranty. (Refer to engine handbook).

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

The benefits under the Aussie Pump warranty are in addition to other rights under Australian Consumer Law.

SAFETY PRECAUTIONS - IMPORTANT

NEVER direct spray jet at any surface that may contain 10. **DO NOT** attempt to disconnect any hose or asbestos material.

- animal. Keep hands and feet clear of the cleaning nozzle at all times.
- any electrical equipment.
- 4. After use release the pressure in the high pressure 15. DO NOT substitute any component part on this hose by operating the gun trigger.
- 5. DO NOT attempt any mechanical repair. If you local Aussie Eco Clean Service Division, phone (02) 8865 3500.
- 6. **NEVER** supply any liquid other than water to the pump inlet.
- 7. DO NOT run dry
- 8. NEVER pull the high pressure hose if it has formed kinks or nooses.
- 9. **NEVER** pull the hose over sharp objects.

- coupling with pressure still in the hose.
- 1. NEVER direct the spray jet at any person or 11. DO NOT operate the machine whilst standing on ladders, use a platform tower or scaffolding.
 - 12. Operate in well ventilated areas only.
- 2. NEVER hold a finger over the high pressure nozzle. 13. DO NOT fill the fuel tank while engine is running
- 3. NEVER direct the spray jet at the machine itself or 14. DO NOT try to repair a leak in the hose or connection while the system is under pressure.
 - machine. Use of incorrect parts could cause serious personal injury.
 - have a problem with your machine contact your 16. Children should NOT be allowed to use the machine.
 - 17. We recommend the use of safety goggles and steel cap boots when using the machine.

SPECIFICATIONS

Aussie Pumps

ASSEMBLY AND PREPARATION FOR USE

Before proceeding with assembly of your new Aussie high pressure water blaster, check that all parts listed below are included.

- 1 x gun handle assembly
 - 1 x dual lance & nozzle assembly

HEAVY DUTY LANCE: To assemble the gun/lance, screw together and check nozzles have been fitted to end of lance.

A. Machine Preparation (initial start-up)

 Check the oil in the pump and gearbox. Note separate reservoirs. With the machine on a level surface the oil lever should cover the red spot in the oil level sight glass on the side of the machine. If necessary, top up with SAE 75W-90.

Do not mix different grades of oil as this may

affect the machines performance. If alternative oil is used, first empty out oil by unscrewing drain plug in bottom of machine.

2. Ensure breather plug is fitted to pump.

WARNING: Before operation ensure top mounted travel plug is replaced by breather plug. Failure to fit breather and keep clean can result in over pressuring of oil chamber (crank case) and can blow oil seals. This will void warranty.

- Note that the gearbox has a separate oil reservoir. Gearbox oil is SAE 90 gear oil.
- Connect battery leads on electric start machines.
- Check oil level in engine and fill with proper grade oil if necessary. (SAE 10W-30 for Honda engines, check engine manual for other makes)
- Check fuel level and fill if necessary. (unleaded petrol)

Aussie Safety Protection Kit

Unloader - ______ factory set, DO NOT adjust

Safety valve

B. Supply Tank

- Connect low pressure hose to tap and fill the 2. supply tank.
- 2. Note: Engine will not start if water level is below low water cut-out.
- 3. Use only clean town water.

Warning: Ensure gate valve from tank is open 5. during operation. Cavitation of the pump is not covered by warranty. Cavitation is a phenomenon causing vacuum pockets to form within the pump that eventually implode under pressure pitting the internal pump surfaces.

C. Before starting the machine

OPERATE IN WELL VENTILATED AREAS ONLY.

- 1. Ensure machine is level
- 2. Turn on water supply.
- 3. Pull gun trigger until water starts to flow in a steady steam then release trigger.

D1. Starting the Honda engine

(refer to engine manual for other engine options)

- 1. Ensure fuel valve is open
 - Move the choke on the engine to the closed position. If engine is warm, move choke half-way.
- 3. Turn engine ON/OFF switch to ON
- 4. Hold the gun trigger on.
 - Start engine, either turn engine key or pull the recoil starter grip lightly until resistance is felt, then pull briskly.
 - After engine starts, release the gun trigger and slowly open the choke.
- 7. Warm up engine for 3 minutes without load.

D2. Starting the engine (Mine spec version)

- 1. Check the emergency stop button has been reset.
- 2. Turn on battery isolator switch.
- 3. Hold the gun trigger on.
- 4. Turn engine key through first to second position.
- 5. After engine starts, release the gun trigger.
- 6. Warm up engine for 3 minutes without load.

KEEP THE MACHINE OUT OF MOISTURE LADEN ATMOSPHERES

HIGH PRESSURE SPRAY CAN PENETRATE THE **SKIN & CAUSE SERIOUS INJURY!**

Never point the spray gun at yourself, other people or animals.

Should the spray penetrate the skin SEEK MEDICAL **ATTENTION IMMEDIATELY!**

E. Pressure washing

WEAR PROPER FACE PROTECTION WHEN OPERATING PRESSURE WASHER!

Machine is now ready for operation.

- 1. For high pressure jetting rotate side grip on dual 4. lance backwards until it stops. Fine control of pressure/flow can be made with small adjustments to the rotation of the grip. There is no pressure adjustment available on single 5. lance options.
- 2. control on the pump as required.

NOTE: Check the system for water leaks, fuel leaks, oil leaks, hose kinks, etc. Correct any problems before proceeding.

Applying detergent F.

(not available on Predator Plus)

Prepare pressure washer detergent solution as 1. required by manufacturer.

UNLOADER SETTING

The high pressure unloader on the machine is factory set to operate the pump at it's rated pressure.

DO NOT ADJUST. Tampering with the unloader will void warranty and can be dangerous.

WARNING:

CHECK NOZZLES AND REPLACE IF WORN

If pressure drops off, check nozzle for wear. Nozzles should be replaced on a regular basis (every month for machines in regular use, every 3 months for machines used intermittently. Using the machine with the incorrect nozzle size or worn nozzle will void warranty and can be dangerous to the operator.

- 2. Place detergent siphon tub/filter into solution.
- 3. Adjust double lance to low pressure setting.
 - Apply cleaning solution to a dry surface, starting at lower portion of areas to be washed and work upward, using long overlapping strokes.
 - Allow time to detergent to activate and then rinse off. DO NOT allow detergent to dry on.

When low pressure and high flow is required, **IMPORTANT**; You must flush the injection system after including detergent application, unwind grip each. Place the siphon hose into a bucket of clean two complete turns. Adjust the detergent water, then run pressure washer in low pressure for 2 minutes.

G1. Stopping the machine

- 1. If using the detergent injector, flush out the chemical by running clean water through the system.
- 2. Allow machine to run for 1 minute without load to cool before stopping.
- 3. Turn engine ON/OFF switch to OFF
- 4. If your machine has a recoil start, pull recoil start until compression resistance is felt. Store the machine in this position to help prevent valve warpage or sticking.
- Close fuel valve. 5.

WARNING DO NOT RUN EXCESSIVE BY-PASS

SWITCH MACHINE OFF WITHIN TWO MINUTES OF CEASING OPERATION AS EXCESSIVE BY-PASS CAN CAUSE HEAT BUILD UP IN PUMP AND SUBSEQUENT DAMAGE.

EXCESSIVE BY PASS RUNNING VOIDS WARRANTY!!

FAILURE TO CLOSE THE FUEL VALVE ON THE ENGINE CAN CAUSE FUEL LEAKAGE WHEN THE MACHINE IS BEING TRANSPORTED!

- 6. Turn off water supply.
- 7. Pull gun trigger to release all pressure in the system, then LOCK THE TRIGGER.
- 8. Hoses may now be disconnected from the machine.

Failure to release pressure before disconnecting the hose will result in the quick coupler o-ring seal blowing out. This o-ring must be replaced before operating machine.

G2. Stopping the machine (Mine spec version)

- 1. If using the detergent injector, flush out the chemical by running clean water through the system.
- 2. Allow machine to run for 1 minute without load to cool before stopping.
- 3. Turn engine key to OFF
- This blaster is fitted with an emergency stop button. After activation, turn engine key to off and reset stop button by rotating until it pops out.
- 5. Battery isolator can be locked off to prevent blaster from operating.
- 6. Turn off water supply.
- 7. Pull gun trigger to release all pressure in the system, then LOCK THE TRIGGER.
- 8. Hoses may now be disconnected from the machine.

CARE AND MAINTENANCE:

AFTER EACH USE

If cleaning agents have been mixed with the incoming water, it is essential to flush the machine with clean water after use.

If there is a danger of freezing anti-freeze should be mixed with the flush water or the machine must be completely drained.

After the final flush stop the machine. DO NOT allow the machine to idle for more than 15 seconds. This is particularly important when there is a danger of freezing. Do not run for longer without water supply.

STORAGE

Store the washer in an upright position, preferably drained of water if there is a danger of freezing (or fill with anti-freeze).

PUMP CRANKCASE LUBRICATION

Proper pressure washer pump crankcase lubrication will help extend the working life of the machine. Follow these important guidelines. We recommend keeping a simple service log book.

- Change oil in pump after initial 50 hour run-in period. (SAE 75W-90)
- Change pump oil every 3 months, use high quality oil. (SAE 75W-90)
- Pump oil level can be checked with the dip stick under the breather cap or by viewing the oil sight gauge where fitted. The oil level is correct if level is in the centre of the gauge. If oil level is low, fill to correct level with recommended oil (SAE 75W-90). **DO NOT** OVERFILL CRANKCASE!
- Replace oil in gearbox (separate chamber) with
 SAE 90 gear oil every three months.

Failure to release pressure before disconnecting the hose will result in the quick coupler o-ring seal blowing out. This o-ring must be replaced before operating machine.

PREVENTATIVE MAINTENANCE

- Keep filter in supply hose connection clean, rinse regularly.
- Use correct size nozzles for machine and replace when worn, check serial tag for correct size.
- Drain water from pressure hoses, gun/lance assembly and accessories after use.
- Protect pump from freezing. Failure to remove water from the pump in freezing temperatures will result in damaged pump manifold.
- Use ONLY injector of the size and type designed for this model.
- **DO NOT** tamper with unloader valve adjustment or alter engine speed.
- **DO NOT** siphon chemicals through the pump, it is designed for water only.
- Incoming water supply must not exceed 60°C, otherwise pumps seal damage could result
- Follow engine manufactures guidelines for engine maintenance. (see engine manual)

TROUBLE SHOOTING GUIDE

FAULT	CAUSE	REMEDY
Pump running normally but pressure low on installation	Pump sucking air Valves sticking Unloader valve seat faulty Nozzle incorrectly sized Worn piston packing	Check water supply and possibility of air ingress. Check and clean or replace if necessary Check and replace Check and replace Check and replace
Fluctuating Pressure	Valves worn Valves blocked Pump sucking air Worn piston packing	Check and replace Check and replace Check water supply and air ingress at joints in suction line Check and replace
Pressure low after period of normal use	Nozzle worn Check valves worn Check valves blocked Unloader valve seat worn Worn piston packing Pistons cracked as a result of dry running	Check and replace Check and replace Check and clean Check and replace Check and replace Replace pistons
Pump Noisy	Air in suction Broken or weak suction or delivery valve spring Foreign matter in valves Worn bearing Excessive temperature of liquid	Check water supply and connections on suction line Check and replace Check and clean Check and replace Reduce temperature
Presence of water in oil	Oil seal worn High humidity in air Piston packing worn	Check and replace Check and change oil twice as often Check and replace
Water dripping below pump	Piston packing worn O.R plunger retainer worn	Check and replace Check and replace
Oil Dripping	Travel plug in use on pump Oil seal worn	Replace with breather plug Check and replace if necessary
Unloader switches repeatedly when gun is off	Leaking gun and/or pressure pipe. Leaky sleeve Worn out kick-back valve body Leaky seals	Renew gun, seal pressure pipe Renew sleeve Check and renew as necessary kick-back valve plate and seat Renew seals
Leaky piston rod	Defective O-Ring/Support Ring	Renew piston rod seals and examine surfaces in guide case
Leaky by-pass at nominal pressure	Nozzle too small, too much water. Worn out by-pass valves	Install larger nozzle Examine and renew as necessary
Pressure gauge shows high pressure fluctuations when shutting off gun	Valve set too high above operating pressure Dirty valve	Adjust the unloader at the operating pressure. Clean valve (removing lime deposits etc). Grease parts before installing.
Pressure in supply line when running on by-pass	Dirty or worn low pressure valves	Remove & clean or replace low pressure valves
Engine will not start	Out of fuel Engine defect	Fill tank with petrol/diesel Return to engine service agent

For engine troubleshooting refer to the engine manufacturer's handbook.

Use engine & pump model to identify your machine: Note: for diesel powered blasters just use pump model

AUSSIE HIGH PRESSURE BLASTER RISK ASSESSMENT

MODELS:

In line with the National Occupation Health & Safety Commission's requirements the data below applies to the Aussie Mobi-blaster range of high pressure water blaster models:

- BB 100
- Predator Plus *
- BB 350/351
- Ultra *
- BB 400

- Python *
- **DESCRIPTION:**

Engine drive high pressure cold water blasters designed for professional cleaning applications.

MATERIAL CONSTRUCTION:

Aussie Mobi-blaster pressure washers are mounted on heavy duty gal frame. They consist of a quality internal combustion petrol engine driving a triplex style three piston high pressure pump. The units are supplied with water tanks, for on-site cleaning, and hose reels with up to 45 metres of high pressure hose to increase operator convenience.

RISK RANKING METHOD:

Risk is the combination of the likelihood of a specific unwanted event and the potential consequences if it should occur.

RISK RANKING METHOD:

For each event, the appropriate probability (a letter A to E) and consequences (a number 1 to 5) is selected.

PROBABILITIES:

- Common or repeating occurrence. Α.
- Known to occur or "it has happened". Β.
- C. Could occur, or "I've heard of it happening".
- D. Not likely to occur.

CONSEQUENCES FOR PEOPLE:

- 1. Fatality or permanent disability.
- 2. Serious lost time, injury or illness.
- 3. Moderate lost time, injury or illness.
- 4. Minor lost time, injury or illness.

RISK RANKING TABLE:

The consequences (loss outcomes) are combined with the probability (of those outcomes) in the risk ranking table to identify the risk rank of each loss event (e.g. a consequence of 3 with a probability of B yields a risk rank of 9).

The table yields a risk rank from 1 to 25 for each set of probabilities and consequences. A rank of 1 is the highest magnitude or risk that is a highly likely, very serious event.

A rank of 25 represents the lowest magnitude of risk, an almost impossible very low consequence event.

Controls must be taken to either eliminate or minimise the risk.

с		PROBABILITY						
O N		Α	В	С	D	E		
S E	1	1	2	4	7	11		
Q	2	3	5	8	12	16		
U E	3	6	9	13	17	20		
N C	4	10	14	18	21	23		
E	5	15	19	22	24	25		

POTENTIAL HAZARD:

Hazard	Yes/No	Risk	Risk Rating	Controls

Signed originator

Job title.....

Date Completed

OVERSPEEDING

EXCESSIVE BYPASS

Do not operate machine at over 3200 rpm Over speeding can cause (engine speed). serious pump damage.

machine off within five minutes of ceasing

operation as excessive by-pass can cause heat

build up in pump and subsequent damage.

HIGH PRESSURE SETTING

The high pressure pump is factory set to operate at its rated pressure. DO NOT ADJUST. Tampering with the pressure regulator will void warranty and can be DANGEROUS.

CHECK NOZZLE MONTHLY

Switch

If pressure drops off check nozzle for wear. Nozzles should be replaced on a regular basis (every month for machines in regular use, every three months for machines used intermittently). Using the machine with the incorrect nozzle size or worn nozzle will void warranty and can be DANGEROUS to the operator.

PRESSURE CLEANER DAILY CHECK LIST

- Check pump oil level
- Check engine & gearbox oil level

Do not run on excessive by-pass.

Excessive bypass running voids warranty.

- Check nozzle for wear
- Check all high pressure components for leaks:
 - gun/lance
 - HP hose
 - all fittings
- Check water filter and clean regularly
- Check unloader, safety valve and thermal dump for leaks

All professional machines need to be thoroughly serviced every three months. The service involved should include the engine manufacturer's recommendations (see separate Engine Manual) and the following;

- Change pump oil
- Check filter for foreign debris

THREE MONTHLY REGULAR SERVICE

- Check unloader, safety valve and thermal dump for leaks
- Check all HP components for leaks: Gun/lance, HP hose and all fittings
- **Replace** nozzles
- Check gearbox to engine key for wear, if key is worn see your local Aussie Eco Clean Service Department. NB Damage generated by worn keys is not covered by warranty.
