

WATCH OUT!

FIRE CHIEF COUNTERFEITS

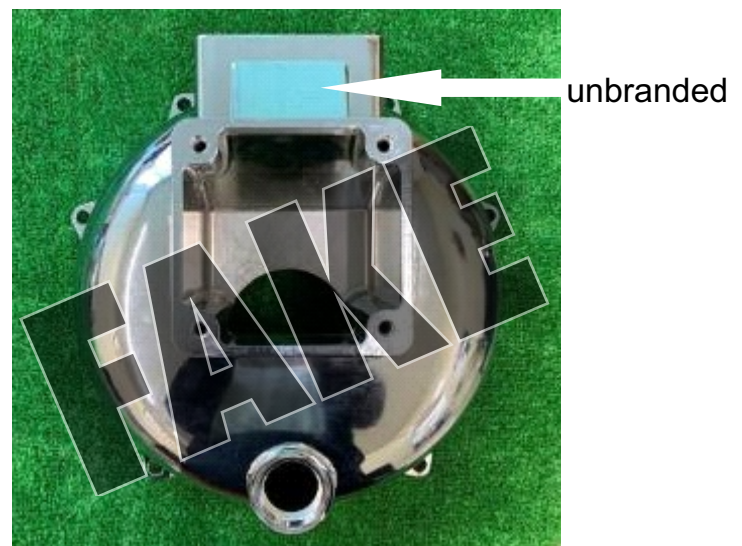

Similar on the surface ...
but LESS performance & COMPROMISED longevity.

Our engineers have analysed their failings

Aussie Quality = performance

1. Brushed aluminum finish
2. Water passages engineered to prevent engine overload
3. High quality impeller
4. Perfectly seated check valve will hold the prime

How to spot the fake ...

1. Chrome plated casing (poor quality & thinner casing)
2. Impeller vane height too large & will **overload engine**
3. Poor quality casting of impeller
4. Loss of prime due to ill fitting check valve

Don't be fooled ... they're not Aussies
